

widget.MainWidget.pushButton  
AddHarmonicListPressed

widget.MainWidget.pushButton  
SaveNewHarmonicListPressed

widget.inputBox

```
graph LR; A["widget.MainWidget.pushButton<br/>AddHarmonicListPressed"] --> C["widget.inputBox"]; B["widget.MainWidget.pushButton<br/>SaveNewHarmonicListPressed"] --> C;
```

The diagram illustrates a widget architecture. On the left, two separate boxes represent different methods of the `widget.MainWidget` class: `widget.MainWidget.pushButtonAddHarmonicListPressed` and `widget.MainWidget.pushButtonSaveNewHarmonicListPressed`. On the right, a single gray box represents the `widget.inputBox` object. Two blue arrows point from the left boxes to the right box, indicating that both methods are associated with or interact with the `widget.inputBox` object.
