

customnode.CustomBaseNode.build
NodeName

customnode.CustomBaseNode.set
NodeNamesToRootAndEnd

customnode.Bool.findRootPort

```
graph LR; A[customnode.CustomBaseNode.build  
NodeName] --> C[customnode.Bool.findRootPort]; B[customnode.CustomBaseNode.set  
NodeNamesToRootAndEnd] --> C; C --> C;
```

The diagram illustrates a flow or dependency structure. On the left, there are two white rectangular boxes. The top box contains the text 'customnode.CustomBaseNode.build' followed by 'NodeName' on a new line. The bottom box contains 'customnode.CustomBaseNode.set' followed by 'NodeNamesToRootAndEnd' on a new line. Arrows from the right side of both boxes point towards a gray rectangular box on the right. This gray box contains the text 'customnode.Bool.findRootPort'. A blue curved arrow originates from the top of the gray box and points back to its top, indicating a self-loop or a recursive call.
