

customnode.CustomBaseNode.build  
NodeName

customnode.CustomBaseNode.set  
NodeNamesToRootAndEnd

customnode.Map.findRootPort

```
graph LR; A[customnode.CustomBaseNode.build  
NodeName] --> C[customnode.Map.findRootPort]; B[customnode.CustomBaseNode.set  
NodeNamesToRootAndEnd] --> C; C --> C;
```

The diagram illustrates a flow from two source nodes to a target node. The top source node, labeled 'customnode.CustomBaseNode.build NodeName', and the bottom source node, labeled 'customnode.CustomBaseNode.set NodeNamesToRootAndEnd', both have blue arrows pointing to a central target node labeled 'customnode.Map.findRootPort'. The target node is shaded gray and features a blue curved arrow pointing back to itself, indicating a self-loop or recursive call.
